

A high-complexity CLIA accredited laboratory, MedArbor Diagnostics assists clinicians and health care providers to quickly identify the pathogens and underlying causes of disease.

We know better patient outcomes are achieved through fast, accurate, and reliable laboratory results.

# Nail Fungal Panel

A fast, reliable and essential Molecular PCR assay for the identification of Dermatophyte, difficult to cure Non-dermatophyte fungi (NDF) and Candida species in onychomycosis.

## Comprehensive Nail Panel Provides:

- Significant improvement over results obtained by culture
- Quick, reliable and valid results
  - Unmatched speed, accuracy and specificity of PCR technology
- Reduced guesswork related to appropriate treatment decisions
- Test results the **same day** the lab receives the sample
- Reduced risk and improved treatment opportunities
- Dependable diagnosis of yeast infections
- Easy nail clipping sample collection

## PANEL TARGETS

### Dermatophytes:

Alternaria Species  
Epidermophyton Floccosum  
Microsporum audouinii  
Microsporum Canis  
Neofusicoccum Mangiferae  
Trichophyton Interdigitale  
Trichophyton Rubrum

### Non-dermatophytes:

Acremonium Strictum  
Aspergillus Niger  
Aspergillus Terreus  
Fusarium Solani

### Candida Panel

Candida albicans  
Candida glabrata  
Candida krusei  
Candida lusitaniae  
Candida parapsilosis  
Candida tropicalis
